APPLICATION FOR A GRANT TO FACILITATE LEARNING AND KNOWLEDGE SHARING

The application template should be completed and transmitted to the Adaptation Fund Board Secretariat by email or fax.

The overall goal of learning grants is to help encourage a culture of learning across institutions and help build the capacities of national implementing entities (NIEs).

Please type in the responses using the template provided. The instructions in the annex to the template provide guidance to filling out the template.

Complete documentation should be sent to:

The Adaptation Fund Board Secretariat
1818 H Street NW
MSN N7-700
Washington, D.C., 20433
U.S.A
Fax: +1 (202) 522-3240/5
Email: afbsec@adaptation-fund.org
A. PROJECT INFORMATION

Date of receipt:
Adaptation Fund Grant ID:
Country/ies: **Costa Rica**
National Implementing Entity: **Fundecooperación para el Desarrollo Sostenible**
Amount of Financing Requested (in U.S Dollars Equivalent): **$149,994**

B. Timeframe of Activity

C. Proposed learning activities

C1. Describe the purpose of the learning grant (Maximum 100 words)

**Summary:**

The purpose is to share knowledge created within the framework of the Adapta2+ Program to promote good practices and facilitate scalability in relation to adapting to climate change in the agricultural, water resource, and coastal sectors.

For achieving this, 3 main actions are going to be implemented:

- Creation of a web-based repository for the programme that seeks to disseminate knowledge on climate change adaptation created.
- Webinars and field days to showcase project best practices and success stories and train other communities about adaptation to climate change.
- Creation of videos to show success stories, best practices, technologies and testimonials lessons learnt from the program.
- Sharing knowledge on climate change adaptation actions through already existing platforms (e-learning tools, for example)

Implementing these actions will increase the resilience of the target groups and make them less vulnerable to any negative effects of climate change.
**Introduction**

The program “Reducing vulnerability by focusing on critical sectors (agriculture, water resources, coastal zones) to lessen the negative impact of climate change and improve the resilience of those sectors negatively impacted by climate change”, also referred to as Adapta2+, is managed by Fundecooperacion para el Desarrollo Sostenible, in its role as an Adaptation Fund accredited NIE. The objective of this program is to reduce the vulnerability of communities to the impacts of climate change by increasing resilience in the following sectors designated as critical: agriculture, water resources, coastal zones and through capacity building. This program is implemented by more than 40 executing entities (See Annex 2), responsible for the development of products (videos, guides, standards, articles, infographics, and others) on the risk of climate change or good climate adaptation practices and therefore there is a valuable opportunity to gather, increase access and share those knowledge products among EE and other stakeholders.

**Why apply for this grant**

The primary reason for applying for this grant is to share experiences, information and products generated by the Adapta2+ Program, to promote good climate change adaptation practices, also this learning grant will serve as a linkage to ensure a more effective connection in upscaling the learning from stage 1 to stage 2 of Adapta2+. During stage 1 of Adapta2+, Executing Entities (+40 EE), developed products containing information on adaptation to climate change. This grant will make it possible to transfer all of the information created by the executing entities to the beneficiary persons and organizations closing any knowledge gaps that may exist. The grant will allow:

- Access to information on climate risks and climate change adaptation through a repository of systematized information
- Creation of videos on good practices, technologies and testimonials that will be disseminated through mass communication media, social media and WhatsApp groups of partner organizations
- Webinars and field days to showcase project best practices and success stories and train other communities about adaptation to climate change.
- Share information on climate risks and climate change adaptation through a repository of systematized information

These actions involving so many executing organizations and partners make it possible to easily identify other stakeholders working towards the same goal, which in turn results in the generation of strategic partnerships to prevent duplication of efforts and work together. In addition, working in conjunction with government institutions ensures sustainable use of the products developed during the implementation of the Adapta2+ Program. Working with these institutions and organizations ensures the use of information on adaptation to climate change generated by the Executing Entities. The expectation is that communities, farmers, producers, institutions, and other stakeholders will improve their recovery capacity through adaptation to climate change. This will be done by disseminating information, increasing awareness, training, and mechanisms for sharing knowledge on related socio-economic and environmental risks and measures for effective adaptation. An important point to consider is that this grant would help to achieve greater results in regions that have not been reached yet and hence will take better advantage of the access to appropriate information.
Indeed, with the implementation of this grant, the Adapta2+ Program will provide Pillar #1 for Costa Rica’s National Climate Change Adaptation Plan, which states “Pillar #1: Management of knowledge on the impact of climate change, climate services and development of local and institutional capacities.

The knowledge to be disseminated will discuss all the topics covered by the Adapta2+ Program (the first step will be to validate and prioritize these products and inputs generated and their respective topics), including agricultural, water resources and coastal topics and generation of capacities, including:

Ecosystem-based Adaptation: For example: Reforestation of mangrove swamps and coastlines, responsible, efficient use of land resources, protection and conservation of water sources and their efficient use, genetic improvement to better adapt to climate changes, regeneration of forest areas, conservation and responsible use of marine resources, adaptation of coral reefs and responsible fishing), forest fire management and control.

Community-based Adaptation: For Example: Recovery of seeds with emphasis on traditional practices, infrastructure analysis and strengthening, early warning systems, and climate change awareness to promote climate related actions and diversification of production, risk reduction and increased resilience.

Instruments for planning, standards, public policy, or national programs: For Example: Climate related financial products to promote adaptation actions, agricultural and livestock insurance, agroecological zoning, early warning systems, appraisals and construction permits considering the climate scenarios, fees for the protection of water resources, infrastructure analysis considering climate scenarios (PIEVC).

Practical tools and methodologies that worked in creating awareness and/or implementing adaptation at different levels: schools, technical training schools, youth groups, indigenous communities, farm associations, farms and local communities. For ex. Training games and manuals, evaluation tools, community participatory methodologies, and others.

- Knowledge about Innovations, including use of technologies and Infotech that facilitated adaptation
- Testimonials of farmers and community members that went through the adaptation processes.

**Relationship of the Grant to the Adapta2+ Program**

More than 200 documents, audio visual products and other materials have been produced during the implementation of the Adapta2+ Program, plus other materials containing information on climate change adaptation experiences and good practices. Thanks to the efforts of many organizations, climate change information in the country has been developed, improved, and strengthened. Opportunities and gaps identified are
the reason to access a Learning Grant, because sharing this knowledge will have a multiplying effect on the impact of Adapta2+ and consequently reach far more organizations and stakeholders.

Greater impact will be achieved through sharing knowledge on related socio-economic and environmental risks and measures for effective adaptation. This will be done through the following actions:

1. Easier access to information on climate risks and climate change adaptation through a repository of systematized information that will facilitate decision making: Initially this will be done among the Executing Entities to validate the information on the products generated during the implementation of each Adapta2+ Program Project. This repository is expected to be a web page containing all the systematized data and allowing for easy access to expedite decision making. And, to ensure the continuity and sustainability of this platform after the Learning Grant is implemented, Fundecooperacion will be responsible for maintenance of this application. In order to build this repository, workshops, meetings and webinars will be held with EEa and other involved actors in the projects.

2. Learn “how to do it” to replicate good practices on adaptation actions: Videos on good practices will be disseminated through mass communication media, social media and WhatsApp groups of allied organizations, such as the Ministry of Agriculture and Livestock. Webinars will be held on a Zoom platform. In addition, there will be in-person field days, to the extent that Covid 19 restrictions will permit, otherwise, they will be held virtually on Zoom.

3. Knowledge acquisition through online training on climate change adaptation practices previously implemented and validated through Adapta2+: The product of this action will be to strengthen existing web platforms with information on adaptation to climate change – these are existing e-courses or platforms belonging to partner organizations that facilitate knowledge sharing and creation.

**Proposed Objectives:**

1. **Link available information on climate risks and other climate change adaptation information produced by Adapta2+ with possible decision-making actions.**

   **Description and relationship with the Adapta2+ Program:** To meet this objective, it will be necessary to identify all information on good practices promoted by Adapta2+, along with tools, publications and any other communications and data on the risks generated by Executing Entities. Subsequently, the information identified will be linked to adaptation actions already validated by the Program, to make it available for making decisions. To ensure the continuity and sustainability of this platform, and implementation of the Learning Grant, Fundecooperacion will be responsible for maintenance of this application.

   This platform will contain information on *Ecosystem-based adaption, community-based adaption and instruments for planning, standards, public policy, or national programs supported or developed by Executing Entities during the implementation of the Adapta2+ Program. This information will be freely accessible so that any person who may be interested can enter the platform, obtain the information, and use it.*
2. **Activities:**

- Hold at least one knowledge sharing workshop, per sector, with the Executing Entities (+40 EEs, see annex 2) to identify all the good practices promoted with Adapta+2, and to validate existing tools, publications and any other product developed or improved, plus all the information on risks generated.
- Connect the information identified with the adaptation actions to make it available for decision making through the virtual platform that will be a database or data repository containing the systematized data.
- Disseminate the existence of the new platform through mass communication media, including radio or social media. And disseminate it through the Executing Entities and partner organizations such as the Climate Change Directorate, the Ministry of Agriculture and Livestock, the Vice Minister of Waters and Seas, Institute of Aqueducts and Sewers.

The workshop will be held among Executing Entities and will be in-person. However, if Covid 10 restrictions do not permit this, it will be developed virtually through a Zoom platform.

**Expected outputs:** 1 systematized repository of information on adaptation actions and 1 workshop report.

2. **Disseminate Adapta2+ adaptation actions and results, to promote the replication of good practices, enhance peer to peer learning and community outreach.**

**Description and relationship to the Adapta2+ Program:** To reach this goal, at least 25 good adaptation practices implemented and validated through the Adapta2+ Program will be defined, in agricultural, water resources and coastal sectors, to prepare a video by adaptation practice. All videos will contain a step-by-step explanation on how to implement each adaptation practice, permitting the persons benefited to easily replicate these actions. In addition, at least 5 webinars will be developed on the results and lessons learned generated during Adapta2+ Program projects and at least 5 virtual or in-person field days or events will be held to share experiences.

The videos, webinars and field days will be developed using information on ecosystem-based adaptation, community-based adaptation, innovations, testimonials, planning tools, standards, public policy and national programs supported or developed by the Executing Entities during implementation of the Adapta2+ Program.

**Activities for the 25 videos on good practices:**

- Define the adaptation measures to be disseminated.
- Develop the videos (audiovisual production)
- Establish the video dissemination strategy.
- Disseminate the videos with the stakeholders.

The 25 videos will be published on Fundecooperacion social media and disseminated by partner organizations. They will also be freely accessible so that any person interested can view them.
Activities for the 5 Webinars:
- Define the topics to be discussed in the webinars.
- Plan and develop the webinars.

The webinars will be freely accessible so that any person interested can participate. Once finalized, the recordings will be shared on the social media of Fundecooperacion and partner organizations.

Activities for the 5 field days:
- Identify and select the model farms and topics to be discussed.
- Plan and develop the field days.

In case the field days are not possible due COVID-19, additional video materials should be created along with the model farms in order to create a similar experience as in the in-person visit. Also, in alliance with local organizations, all people who do not have internet access but are interested in participating, may form small groups and participate in person, according to sanitary restrictions and following the guidelines of the partner organization. However, this option must be coordinated with the local partner organization.

Expected outputs: 25 videos on implementing good practices in the agriculture, water resources and coastal sectors, 5 webinars on the results and lessons learned through the Adapta2+ Program and 5 virtual or in-person field days or events held to share experiences.

3. Strengthen existing knowledge transfer platforms using the adaptation results, actions and lessons learned generated through the Adapta2+ Program.

Description and relationship with the Adapta2+ Program: Meeting this objective will require mapping institutional and organizational existing web platforms on the management and transfer of knowledge on good environmental practices and climate actions. Afterwards, 2 existing web platforms that require strengthening on climate change adaptation topics and the development of new modules for teaching good practices validated by the Program will be selected so that more persons will have access to training courses on adaptation practices in the agricultural, water resources and coastal sectors.

The knowledge to be incorporated into these platforms will be freely accessible by anybody interested in entering the platform, to obtain and use the information.

Activities:
- Map existing web platforms on management and transfer of knowledge on good environmental practices and adaptation to climate change.
- Select the existing web platforms that require strengthening on climate change adaptation topics.
- Develop the new learning modules on good adaptation practices.
2. Disseminate the existence of these new adaptation modules through mass communication media and executing and partner organizations.

Promote the use of this info through specialized channels, for instance at technical school level, farmers associations, community associations, technical assistance teams and university groups.

**Expected output:** 2 web platforms strengthened with information on adaptation to climate change and lessons learned generated by the Adapta2+ Program.

C2. Using the table below, describe the activities to be undertaken to share knowledge with other NIEs or the wider climate adaptation community or to develop knowledge/guidelines through partnerships (Maximum 100 words for each activity)

<table>
