

## PRE-CONCEPT FOR A REGIONAL PROJECT/PROGRAMME

### PART I: PROJECT/PROGRAMME INFORMATION

**Title of Project/Programme:** The Limpopo Basin Adaptation Initiative: a community-centred approach to enhancing climate resilience at a basin scale

**Countries:** Botswana, Mozambique, South Africa, Zimbabwe

**Thematic Focal Area<sup>1</sup>:** Transboundary water management

**Type of Implementing Entity:** Multilateral Implementing Entity

**Implementing Entity:** World Food Programme

**Executing Entities:** LIMCOM, Global Water Partnership Southern Africa

**Amount of Financing Requested:** 13 995 000 (in U.S Dollars Equivalent)

**Project Formulation Grant Request:** Yes  No

**Amount of Requested financing for PFG:** (in U.S Dollars Equivalent)

**Letters of Endorsement (LOE) signed for all countries:** Yes  No

*NOTE: LOEs should be signed by the Designated Authority (DA). The signatory DA must be on file with the Adaptation Fund. To find the DA currently on file check this page: <https://www.adaptation-fund.org/apply-funding/designated-authorities>*

**Stage of Submission:**

- This pre-concept has been submitted before
- This is the first submission ever of the pre-concept

In case of a resubmission, please indicate the last submission date: *Click or tap to enter a date.*

**Please note that pre-concept should not exceed 5 pages (in addition to this first cover page)**

<sup>1</sup> Thematic areas are food security; disaster risk reduction and early warning systems; transboundary water management; innovation in adaptation finance.

## Project/Programme Background and Context:

The Limpopo River Basin is a transboundary region of major importance and spans parts of Botswana, Mozambique, South Africa, and Zimbabwe. Its main course flows eastward for 1,750 km while the basin is almost 408,000 km<sup>2</sup> in extent. The geographic location and transboundary nature, diversity of its topographic regions, disparate land-uses and climatic zones complicates effective and congruous management at a national and regional scale – and accelerates the urgency to address the impacts of climate change in the basin. The basin is a critical resource within the region, providing ecosystem services that underpin a diverse range of economic activities. However, climate change is impacting water and land resources in the basin – reversing many development gains. This leaves communities in the river basin vulnerable. The Limpopo Basin has also been affected by extreme weather events affecting crop production, threatening national food security and economic development. The basin has already experienced shifts in the crop growing seasons and has been subjected to severe droughts, for example, those recorded during 1991/92, 1994/95, 2002/03, 2008/09, and 2015/16. The 2015/16 El Niño Southern Oscillation (ENSO) induced record droughts in the region<sup>2</sup>. Maximum temperatures in the Limpopo Basin have increased by between 1 °C and 1.4 °C in summer months since the 1960s. This trend is expected to continue with a significant increase in the frequency of hot extremes in the basin and a decrease in the number of cold extremes<sup>3</sup>. There has been an increase in rainfall intensity, accompanied by a concomitant increase in the duration of dry spells. General projections indicate a reduction of rainfall in March, April, and May (the autumn months)<sup>4</sup>. In the long term, the average rainfall is expected to decrease by up to 15 percent and in the north-eastern side of the basin, rainfall is expected to reduce by as much as 20 percent in summer by 2100<sup>5</sup>.

The proposed project aims to build climate adaptive capacity of institutions and build the climate resilience of communities in the Limpopo basin through addressing vulnerability to climate variability and change because of several interrelated factors, including the semi-arid climate, land management and land degradation which affect the water cycles climate change impacts (including increasing climate-related disasters) and the high climate sensitivity of many livelihoods. The countries face barriers in ensuring that a large proportion of local livelihoods (mainly smallholder farmers) reliant on rainfall, have the adaptive capacity to respond to the impacts of climate change. These barriers – include lack of science-based information to better understand community vulnerabilities, harmonisation of legal frameworks addressing climate change issues, limited implementation of concrete adaptation actions and lack of vertical and horizontal integration aimed at building climate resilience.

## Project/Programme Objectives:

The overall objective of the project is to strengthen the climate adaptive capacity of institutions at regional, national and local levels while enhancing the climate resilience of communities in the Limpopo basin with the understanding that human wellbeing can be sustainable only in healthy ecosystems. The action will promote an integrated water resources management and ecosystem-based adaptation within the framework of a river basin approach. The specific objectives of the project are:

- To improve the knowledge base at both institutional and community levels on a holistic river basin management as well as on the most critical climate adaptation approaches.
- To enhance decision-making capabilities of institutions and communities to design catchment/sub-basin plans combining science-based information and local knowledge within a river basin-based coordinated approach.
- To implement nature-based solutions, community-based restoration and livelihood support activities to contribute to the improvement of climate resilience of the population.

## Project/Programme Components and Financing:

Project/Programme Components	Expected Outcomes	Expected Outputs	Countries	Amount (US\$)
Component 1. Strengthening institutional capacity and decision-making tools for enhanced adaptation planning	1.1 Evidence-based decision making practiced through improved knowledge and tools on climate risks and impacts.	1.1.1 Community-level climate change vulnerability assessments improved, aligned with national policies, and incorporated into basin-level frameworks.	Botswana, Mozambique, South Africa, Zimbabwe	1 250 000
		1.1.2 Baseline studies on governance capacity conducted at a basin scale for improved knowledge of transboundary and cross-sectoral adaptation planning	Botswana, Mozambique, South Africa, Zimbabwe	850 000
	1.2 Capacity enhanced for	1.2.1 Capacity at local, national and basin levels strengthened for effective	Botswana, Mozambique,	1 350 000

<sup>2</sup> BFAP (Bureau for Food and Agricultural Policy). *Policy Brief on the 2015/2016 Drought*.

<sup>3</sup> Petrie and others 2014

<sup>4</sup> LIMCOM 2013

<sup>5</sup> *Ibid.*

Project/Programme Components	Expected Outcomes	Expected Outputs	Countries	Amount (US\$)
	transboundary and cross-sectoral adaptation planning	gender-responsive adaptation planning at a basin scale.	South Africa, Zimbabwe	
		1.2.2 Climate change adaptation strategy and plan designed and adopted at a basin scale to mainstream adaptation planning into existing policies and align new policy frameworks	Botswana, Mozambique, South Africa, Zimbabwe	750 000
<b>Component 2.</b> Adopting a community-based approach to adaptation for enhanced climate resilience	2.1 Strategic water source areas in the Limpopo Basin sustainably managed for improved ecosystem services	2.1.1 Enhancing climate resilience of strategic water sources areas to reduce land degradation and enhance water quality	Botswana, Mozambique, South Africa, Zimbabwe	2 200 000
		2.1.2 Ecosystem restoration and sustainable land management in hotspots areas undertaken to respond to climate-related disasters through an inclusive community-based participatory approach	Botswana, Mozambique, South Africa, Zimbabwe	3 570 000
	2.2 Climate-resilient livelihoods and practices supported at a community level	2.2.1 Climate-resilient and diversified livelihoods supported for increased resilience at a community level	Botswana, Mozambique, South Africa, Zimbabwe	1 150 000
		2.2.2 Knowledge management & learning outputs developed to promote lessons learned and facilitate the uptake of investments into upscaling and replication of project activities	Botswana, Mozambique, South Africa, Zimbabwe	360 000
1. Project/Programme Execution cost				1 330 000
2. Total Project/Programme Cost				11 475 000
3. Project/Programme Cycle Management Fee charged by the Implementing Entity (if applicable)				1 190 000
<b>Amount of Financing Requested</b>				<b>13 995 000</b>

### Project Duration: (In years and months)

Five years (60 months)

## PART II: PROJECT/PROGRAMME JUSTIFICATION

The project adopts a regional approach to enhance collective action between regional and national institutions aimed at building community adaptive capacity resilience through the implementation of a range of interconnected institutional and concrete adaptation interventions. The project recognises that climate change impacts in the river basin transcend national borders and can lead to instabilities on shared resources. A collaborative regional approach is necessary to effectively address climate challenges in the Limpopo basin. This approach will involve the Limpopo Watercourse Commission (LIMCOM) and Southern African Development Community (SADC) to ensure a common platform for dialogue, exchange, and development of long-term and sustainable climate change adaptive capacities. The approach leverages on the cooperation that the countries have established – and focuses on ensuring that the institutional mechanisms respond to addressing climate change challenges and enhance adaptive capacity of its inhabitants. The project is part of the SADC Great Green Wall Initiative, contributing particularly to the investment pillars: Pillar 1 on Water for all, Pillar 3 on Productive and resilient ecosystems (land, biodiversity & climate change) and Pillar 5 on Resilient food systems. By sharing strengths and knowledge, the four countries will harmonize resources to generate transboundary solutions for communities in all countries. The project will ride on the implementation of SADC Climate Change Strategy and the Drought Risk Management and Mitigation Strategy.

The project entails improving the **knowledge base regarding adaptation needs** at both community and institutional levels and **build institutional capacity** to address these needs, design a **basin-wide adaptation strategy** to support alignment of adaptation planning in the transboundary context of the Limpopo Basin. The project will also implement concrete **climate risk reduction investments at a local level** to implement climate resilient actions addressing land degradation, securing critical ecosystems and supporting the most vulnerable communities within the basin. Additionally, the project will develop knowledge products regarding project activities and lessons learned to contribute to an evidence base of effective adaptation actions and facilitate investments into the scale up and replication of project activities.

Through increasing knowledge on community climate vulnerabilities in hotspots, strengthening institutional capacity and decision-making tools for enhanced climate adaptation planning – the project will strengthen the regional and national capacities required to effectively manage climate risks, support planning and decision-making for adaptation action at a basin scale. The evidence base built will contribute to improved adaptation action at multiple levels strengthening transboundary governance structures and enhancing institutional capacity at local, and national. The knowledge generated will also feed into an adaptation strategy developed at the basin scale, which will serve to mainstream adaptation planning into existing policies and support policy harmonisation. Through development of knowledge and tools on climate risks and impacts, the project aims to address the existing knowledge gaps on vulnerability at a local level, while simultaneously addressing existing gaps. The updated and newly identified vulnerabilities will enable stakeholders to co-design and adopt the basin-level Adaptation Strategy and align with national and regional instruments. In conducting the vulnerability assessments, a discrete focus will be on the most vulnerable groups, including inter alia women, persons living with disabilities and the youth and will be identified during the project design. Institutional baseline assessments will identify capacity needs, challenges, and barriers for implementing adaptation approaches in the transboundary environment of the Limpopo Basin.

The project will implement concrete adaptation actions through community-based approaches aimed at enhanced climate resilience through implementing locally based sustainable land management practices and ecosystem-based approaches that will contribute to addressing climate-related disasters in prioritized communities and hotspots. The project will further work on protecting strategic water source areas to enhance climate resilience in hotspot areas; while simultaneously supporting the development of diversified and climate resilient livelihood practices for the most vulnerable communities in the basin. Learnings from GEF 7-funded project *Integrated Transboundary River Basin Management for the Sustainable Development of the Limpopo River Basin*, which is currently in its first year of implementation (2023) will be critical. The proposed AF project will focus on enhancing resilience to climate-related disasters in the implementation of the sustainable land management approaches from the GEF 7 project. The selection of these specific livelihood interventions will be informed through community engagements (during full proposal development) and the community vulnerability assessment (supported by the AF project), gender equality and social inclusion analyses to strengthen the responses and is likely to include support for climate resilient agriculture or other rural livelihoods and the distribution of livelihood assets that can be used to develop local value chains and improve local level resilience.

The project is aligned to the Limpopo Integrated Water Resources Management (IWRM) Plan, the LIMCOM Gender Equality and Social Inclusion Strategy and Implementation Plan (2021-2025) and other relevant existing plans such as the National Adaptation Plans, SADC Great Green Wall National Action Plans, National Land Degradation Neutrality Targets and National Drought Plans, among others. Furthermore, the project is aligned to the sustainable development and climate change adaptation priorities of the four countries, and these include but is not limited to the respective National Adaptation Plans and Adaptation Programmes of Action (NAPs and NAPAs), Nationally Determined Contributions (NDCs), and National Climate Change Response Strategies (NCCRSs). Relevant common priorities include: i) aligning adaptation priorities with development objectives; ii) increased capacity to manage water-related climate risks; and iii) improved ecosystem and community resilience to climate change. As such, the project will not only contribute to basin level plans and strategies but also to the implementation of region-wide coordination will reduce duplication, generate cost savings, and allow for a more coordinated and effective reach to more communities. Moreover, enhancing regional dialogue and cooperation is crucial for the prevention of transboundary resource conflict, contributing to stability and a conducive environment for sustainable development.

The project will introduce innovative solutions to climate change adaptation implementing new but proven adaptation approaches in ways that consider the transboundary/regional nature of the basin context for the capacity strengthening and adaptation planning aspects as well as the individual country and community contexts for the proposed concrete adaptation interventions. This approach promotes interventions that are new to the basin but that have been successfully implemented in similar context elsewhere. During further project design, cost-effectiveness will be prioritised by considering the direct and indirect benefits that will accrue from project implementation. These will likely include benefits related to i) improved supply of ecosystem goods and services; ii) socioeconomic resilience; and iii) water resource management. The project aims to improve the long-term sustainability of climate adaptation building activities by strengthening knowledge transfer and collective learning. It will build on and extend the reach of existing regional and national knowledge management platforms. By aligning and enhancing these efforts, the project aims to create a sustainable and collaborative environment that fosters effective learning and knowledge exchange across the entire Limpopo River Basin. This will help ensure that climate adaptation building activities are not only successful in the short term but also contribute to the long-term sustainability of the region.

The project will be implemented in a manner that mainstreams Gender Equality and Social Inclusion (GESI) across all activities. While developing the project further, the specific needs of the most vulnerable groups, including women, persons living with disabilities and the youth will be identified and actions will be implemented to guarantee balanced participation in decision-making processes and project activities. The targeting and selection of the beneficiaries will be based on local level engagements undertaken under the project. This will ensure that the most vulnerable, including households having persons

with disabilities, pregnant and lactating mothers, children, and the elderly are prioritised. At an institutional level the pre-concept note was developed in close collaboration<sup>6</sup> between LIMCOM, member state representatives, and project partners (WFP, UNCCD, and GWP). At a local level, stakeholder engagement with project beneficiaries will additionally be a central pillar in the development of the project. The development of the project CN and FP will include extensive on-the-ground engagements in all four countries. The information gathered during these engagements will be used to formulate the basis for project interventions and subsequent engagements built into the project implementation will ensure that the specific project interventions implemented are developed in a cooperative manner and are directly responsive to the needs of the specific beneficiaries, whether institutional actors or vulnerable households.

Sustainability will be mainstreamed during the project design phase by promoting a community-based participatory approach in all project activities, which will enable communities and local authorities to take ownership of the project results. The sustainability of the project will be enhanced by sustainable land management of soil and water resources, while sustainability beyond the project lifespan will be pursued through institutional development and capacity-building programs designed to create a critical mass of effective actors, from public sector institutions to grassroots organizations and civil society. The project will be implemented in a manner that prioritises the needs of the most vulnerable. Indeed, the local level approach to vulnerability analyses will ensure that the households that are vulnerable to climate risks and food insecurity will be identified and concrete adaptation actions implemented. Additionally, by addressing the impacts of climate change on upstream strategic water source areas, through an ecosystem-based approach, populations throughout the basin will have better access to productive lands and water. This will enhance local adaptive capacities and improve stability in the face of climate-related disasters and empower communities to cope with climate change impacts.

### **PART III: IMPLEMENTATION ARRANGEMENTS**

The proposed project will be executed over a five-year period in collaboration between the World Food Programme (WFP) and the LIMCOM Secretariat. The project will align closely with the abovementioned GEF 7-funded project in the basin, focusing on supporting its concrete adaptation outputs, i.e., community-based sustainable land management<sup>7</sup>. Further synergies with the LIMCOM GEF-7 project include capitalising on the existing governance and implementation structures to strengthen collaboration between the two projects, as well as joint knowledge management and learning activities.

#### **Implementing Entity**

WFP is submitting this project as an accredited Multilateral Implementing Entity (MIE) for the AF. In its capacity as MIE, WFP will be in charge of the project cycle management, overseeing overall project progress, including financial oversight, monitoring and evaluation support, as well as technical backstopping and reporting to the AF.

#### **Executing Entity**

The project will be co-executed by LIMCOM and the Global Water Partnership Southern Africa (GWP-SA), led by LIMCOM. The executing entities (EEs) will be responsible for effective and efficient delivery of the project outputs and ensuring objectives and outcomes are achieved as per the project document.

#### **Project Management Unit**

Upon receipt of funding, the Project will set up a Project Management Unit (PMU) to manage all execution responsibilities and be responsible for the progress reporting on all field-level activities. The PMU will be tasked with the day-to-day operations and management of the Project activities under the direct supervision of the Project Manager (PM).

#### **Steering Committee**

The Project Steering Committee (PSC) will be chaired by the LIMCOM Secretariat and constitute representation from the respective LIMCOM Member States and partner organisations (GWP-SA and WFP) to provide overall guidance and policy support for project execution.

---

<sup>6</sup> Consultations with Member States/country representatives were held in June 2022, as well as August and November 2023. Community-level consultations are planned for 2024.

<sup>7</sup> Support to the GEF-7 SLM outputs can take the form of additional thematic interventions in existing target sites (i.e., including additional activities), or expanding the geographic coverage of existing initiatives to additional target sites.

## PART IV: ENDORSEMENT BY GOVERNMENTS AND CERTIFICATION BY THE IMPLEMENTING ENTITY

**A. Record of endorsement on behalf of the government<sup>8</sup>** *Provide the name and position of the government official and indicate date of endorsement for each country participating in the proposed project/programme. Add more lines as necessary. The endorsement letters should be attached as annexes to the project/programme proposal.*

<i>(Enter Name, Position, Ministry)</i>	<i>Date: (Month, day, year)</i>
<i>(Enter Name, Position, Ministry)</i>	<i>Date: (Month, day, year)</i>
<i>(Enter Name, Position, Ministry)</i>	<i>Date: (Month, day, year)</i>
<i>(Enter Name, Position, Ministry)</i>	<i>Date: (Month, day, year)</i>

**B. Implementing Entity certification** *Provide the name and signature of the Implementing Entity Coordinator and the date of signature. Provide also the project/programme contact person's name, telephone number and email address*

<p>I certify that this proposal has been prepared in accordance with guidelines provided by the Adaptation Fund Board, and prevailing National Development and Adaptation Plans (.....list here.....) and subject to the approval by the Adaptation Fund Board, <u>commit to implementing the project/programme in compliance with the Environmental and Social Policy of the Adaptation Fund</u> and on the understanding that the Implementing Entity will be fully (legally and financially) responsible for the implementation of this project/programme.</p>	
<p><i>Name &amp; Signature</i> Implementing Entity Coordinator</p>	
<i>Date: (Month, Day, Year)</i>	<i>Tel. and email:</i>
<i>Project Contact Person:</i>	
<i>Tel. And Email:</i>	

<sup>8</sup>Each Party shall designate and communicate to the secretariat the authority that will endorse on behalf of the national government the projects and programmes proposed by the implementing entities.

## PART IV: ENDORSEMENT BY GOVERNMENTS AND CERTIFICATION BY THE IMPLEMENTING ENTITY

**A. Record of endorsement on behalf of the government<sup>8</sup>** *Provide the name and position of the government official and indicate date of endorsement for each country participating in the proposed project/programme. Add more lines as necessary. The endorsement letters should be attached as annexes to the project/programme proposal.*

**Endorsement for the “The Limpopo Basin Adaptation Initiative: A  
Community-Centered Approach to Enhancing Climate Resilience at a Basin  
Scale”.**

In my capacity as designated authority for the Adaptation Fund in Botswana, I confirm that the above regional project pre-concept note is in accordance with the government's national priorities in implementing adaptation activities to reduce adverse impacts of, and risks, posed by climate change in the Limpopo River Basin.

Accordingly, I am pleased to endorse the above project pre-concept note titled “*The Limpopo Basin Adaptation Initiative: a community-centered approach to enhancing climate resilience at a basin scale*” to be funded by the Adaptation Fund. If approved, the project will be implemented by World Food Programme and co-executed by LIMCOM and the Global Water Partnership Southern Africa.

Yours Sincerely

## Project Formulation Grant (PFG)

Submission Date: July 2024

Adaptation Fund Project ID:

Country/ies: Botswana, Mozambique, South Africa, Zimbabwe

Title of Project/Programme: The Limpopo Basin Adaptation Initiative: a community-centred approach to enhancing climate resilience at a basin scale

Type of IE (NIE/RIE/MIE): MIE

Implementing Entity: World Food Programme (WFP)

Executing Entity/ies: LIMCOM, Global Water Partnership Southern Africa

### A. Project Preparation Timeframe

Start date of PFG	November 2024
Completion date of PFG	October 2025

### B. Proposed Project Preparation Activities (\$)

Describe the PFG activities and justifications:

List of Proposed Project Preparation Activities	Output of the PFG Activities	USD Amount	Budget note
<p>Drafting the project concept note including situation analysis.</p> <ul style="list-style-type: none"> <li>- Collection of additional data at the national level</li> <li>- Identification of project sites and description of project sites.</li> <li>- Preliminary environmental and Safeguards screening</li> <li>- Gender and social inclusion high-level assessment</li> <li>- Preliminary M&amp;E and project indicators, development of monitoring and evaluation plan</li> </ul>	<p>Project concepts note drafted and ready for submission</p>	<p>27500</p>	<p>Costs of hiring expertise to support the drafting of the concept note.</p>

<p>Consultations (stakeholder &amp; community) and local consultations for concept note drafting.</p>	<p>Community Consultation Report, Stakeholders Consultation Report, project concept note developed taking into account selected project site community challenges and needs, priority activities to significantly improve the adaptive capacity and food security. of the poorest and most vulnerable households, technical climate change adaptation inputs as well as the perspectives of all Stakeholders.</p>	<p>8500</p>	<p>Traveling and logistics costs of consultant and supporting experts for:  1. a. Consultation with the technical teams in all 4 countries  1. b . Consultations with members of the community through the use of participatory techniques  2. Consultations with national governments, local actors, and relevant stakeholders on a binational level  2. Validation of the complete concept note with national and territorial governments, local governments, and communities.  3. ESS and Gender consultation</p>
<p>Drafting the project's full proposal</p>	<p>Project full proposal is drafted and is ready for submission. Identification of project or programme indicators and development of monitoring and evaluation plan. Assessing the capacity of executing partners.</p>	<p>38500</p>	<p>Costs of hiring expertise to support the drafting of the full project proposal and expertise to conduct the analyses.</p>
<p>Consultations (stakeholder &amp; community) and local consultations for full proposal drafting</p>	<p>Community Consultation Report, Stakeholders Consultation Report, project full proposal developed</p>	<p>40000</p>	<p>Traveling and logistics costs of consultant and supporting experts for:</p>

	<p>considering community challenges and needs, priority activities to significantly improve the adaptive capacity and food security. of the poorest and most vulnerable households, technical climate change adaptation inputs as well as the perspectives of all Stakeholders.</p>		<p>1. a. consultation with the technical teams in all 4 countries  1. b. Consultations with members of the community through the use of participatory techniques  2. Consultations with national governments, local actors, and relevant stakeholders on a binational level  3. Validation of the complete concept note with national and territorial governments, local governments, and communities</p>
Validation Workshops	Workshops to discuss the specific project and program ideas	15500	<p>Costs to cover the organization of the project full proposal technical Workshops to be conducted in the 4 target countries.  a. Organizing a regional consultation. Workshop for government and stakeholders)  b. Language Translators for the workshop into Portuguese for Mozambican participants from the government</p>
Climate analysis/ risk assessments, including identifying hazards, and vulnerabilities, development of	Identify all possible events that pose a threat to the community and environment which	25000	Costs for expertise to conduct the analyses. This includes travel cost for missions

scenarios and determining hazard mitigation options. This will include leveraging other projects that are being implemented in the basin for complementarity.	with which the project can anticipate and address rather than mitigate. Include a water-land-climate nexus analysis and identify strategic water resource areas, hotspot areas as well types of activities to strengthen livelihoods in the hotspot areas. Develop multi-criteria assessment for site selection.		
Gender and Environmental and Social risk analyses and formulation of Environmental and Social Management Plan and Gender Action Plan.	ESS screening report, ESMP report, gender transformative strategy, case stories on gender, after action review	25000	Costs for ESS consultation at the full proposal stage which includes the support of technical experts and travel costs for missions.
<b>Total Project Formulation Grant</b>		<b>180 000</b>	

Please describe below each of the PFG activities and provide justifications for their need and for the amount of funding required:

As per AF guidance, 20% of the total grant which amounts to \$36,000 will be allocated to the development of the Concept Note. This includes the hiring of a consultant to draft the concept note and the travel costs for the community and stakeholder consultations. The remaining funds will be allocated to the development of the full project proposal. This includes activities such as the development of key analyses, stakeholder workshop for validation, technical expertise for ESS and gender assessment. Similarly, to the concept note development, the remaining activities also include the hiring of a consultant to draft the full proposal and the travel costs for the community and stakeholder consultations. Kindly refer to the budget note above for more details.

### C. Implementing Entity

This request has been prepared in accordance with the Adaptation Fund Board's procedures and meets the Adaptation Fund's criteria for project identification and formulation.
