

Project Performance Report

Overview

Period of Report (Dates)	3/12/2022 - 3/12/2023
Project Title	Enhancing the Climate Resilience of vulnerable island communities in Federated States of Micronesia
Project Summary	island communities in Federated States of Micronesia The Federated States of Micronesia (FSM), a group of The Federated States of Micronesia (FSM), a group of The Federated States of Micronesia (FSM), a group of approximately 600 islands, is located near the Equator about 4,000 km southwest of the Hawaiian Islands in the Western Pacific Ocean. Areas of small island countries, such as the FSM, exceed well over 5000 mm of precipitation annually which makes them some of the wettest places on Earth. Nevertheless, their geologic and geographic settings, technology, government capacity, villagescale governance and knowledge base can still make accessing safe drinking water difficult. The overall goal of the project is to build social, ecological and economic resilience of the target island communities of the Federated States of Micronesia and reduce their vulnerabilities to extreme drought, sea level rise and other climate risks through water resource management, coastal resource and development planning, and by promoting gender perspectives and ecologically sound climate resilient livelihoods. The project aims at reducing the vulnerability of the selected communities to risks of water shortage and increase adaptive capacity of communities living in Woleai, Eauripik, Satawan, Lukunor, Kapingamarangi, Nukuoro, Utwe, Malem to drought and flood-related climate and disaster risks. The objectives of the project are: 1. Prepare the necessary institutional and regulatory frameworks, policies, guidance and tools to help deliver a climate resilient FSM.2. Strengthen water and livelihood security measures to help 6 outer atoll islands adapt to impacts of climate change related to water, health and sanitation. 3. Provide communities with climate resilient infrastructure to help relocate from high risk coastal inundation sites. 4. Capture and share the local knowledge produced on climate change adaptation and accelerate the understanding about the kinds of interventions that work in island environments in FSM.
Database Number	AF00000107

Implementing Entity (IE)	Secretariat of the Pacific Regional Environment Programme
Type of IE	Regional Implementing Entity
Country(ies)	Micronesia, Federated States of
Relevant Geographic Points (i.e. cities, villages, bodies of water)	The FSM is located near the equator about 4,000 km southwest of the Hawaiian Islands in the Western Pacific Ocean and within the Caroline Islands group. It is a group of approximately 607 islands covering 2,736 square kilometers in the western Pacific Ocean. The land area totals 704.6 square kilometers, with 7, 192 square kilometers of lagoon area. The islands vary from small islands to atolls and large volcanic islands with land area of more than 80 square kilometers. Approximately 65 of the islands are inhabited.
Name of Implementing Entity Focal Point	Secretariat of the Pacific Regional Environment Programme (SPREP)

Project Milestones		
AFB Approval Date	3/17/2017	
IE-AFB Agreement Signature Date	6/22/2017	
Start of Project/Programme	3/13/2018	
Actual Mid-term Review Date (if applicable)	9/23/2021	
Original Completion Date	3/12/2023	
Revised Completion Date after approval of extension request (if applicable)	3/12/2024	

Were there any approval condition for this Project?

Yes

Environmental and Social Safeguards Having considered document AFB/PPRC.26-27/5 ncluding its Annexes, and the recommendation by
e l
he Project and Programme Review Committee (PPRC), the Adaptation Fund Board decided to: a) Approve the change in outcome, outputs and related indicators, the budget reallocation at output level and the amended disbursement schedule for the project 'Enhancing the climate change resilience of vulnerable island communities in the Federated States of Micronesia", as requested by the Secretariat of the Pacific Regional Environment Programme (SPREP) and as contained in the revised project proposal presented as Annex 2 of document (AFB/PPRC.26-27/5; b) Request SPREP to submit to the secretariat for clearance prior to the execution of the coastal protection measures: (i) The Environmental Impact Assessment (EIA) to be undertaken in relation to the coastal protection measures; and (ii) The revised Environmental and Social Management Plan prepared in accordance with
FA nh'I VI of Son Ahh h Enum

	the findings of the EIA as aforementioned and in
	compliance with the Adaptation Fund's
	Environmental and Social Policy. c) Request the
	secretariat to draft an amendment to the agreement
	between the Board and SPREP to reflect changes
	made under subparagraphs a) and b). Decision B.35-
	36/18
Current Status	Condition not met
	The activity is delayed due to the COVID-19 travel
	restrictions into FSM. Procurement for the
	undertaking of the Environmental Impact Assessment
Planned actions, including a detailed time schedule	(EIA) for the coastal protection measures has been
	finalised however contract is yet to be awarded. Once
	the EIA is completed, the Environmental and Social
	Management Plan will be reviewed and updated in
	relation to the EIA findings.

List (only) inception report/ extension request(s)/ MTR that have been prepared for the project and provide date(s) of submission for each

Mid-Term Review MTR finalised September 2021. Project Restructure Restructure Document - including extension request (December 2019) Revised Project Plan (May 2020) AF Board notification (February 2021) Inception Reports Project Inception Report (March 2018) FSM National Inception Report FSM AF National Steering Committee Minutes Yap State Inception Report (2019) Chuuk State Inception Report (2019) Pohnpei State Inception Report (2019) Kosrae State Inception Report (2019)

Actual co-financing (if the MTR or TE have not been undertaken this reporting		
period, do not report on actual co-financing)		
Does this Project have Co-Financing?	No	
How much of the total co-financing as committed in the Project Document has actually been realized? (\$)	\$0.00	
Estimated cumulative actual co-financing as verified during Mid-term Review (MTR) or Terminal Evaluation (TE). (\$)	\$0.00	
Add any comments on actual co-financing in particular any issues related to the realization of inkind, grant, credits, loans, equity, non-grant instruments and other types of co-financing.		

Risk Assessment

Identified Risks		
List all Risks identified in project preparation phase and what steps are being taken to mitigate then		
Identified Risk	Current Status	Steps taken to mitigate risk

Delay in recruiting appropriately skilled staff and continuity of staff	Low	(a) Advertising in FSM and utilising job opportunity sites and promote through contact networks; (b) Encourage the FSM Personnel office to continuously advertise the positions; Request Department staffs to share the advertisement on their social media platforms for instance Facebook, etc. (c)The PMU has filled the project accountant and communications officer positions, which allows the downgrading of this risk status.
High turnover of staff members in project management unit may negatively impact on the delivery of project activities	Moderate	(a) All project-related staff positions are recruited at FSM staff rates; (b) Implementation of professional development opportunities. (c) More competitive salaries offered to retain or obtain staff
Lack of an enabling environment to enable the Project to work effectively on the outer islands	Low	(a) The Project will work through State and Outer Island mechanisms; community engagement and participation will be a priority; (b) The island coordinators are encouraged to continuously seek cooperation and feedback from community members on activities being implemented. (c) Island coordinators are encourage to report / request regularly to PMU on the needed materials to implement activities.
Reputational risk for the Executing Agency and Implementing Agency	Low	(a) The PMU is experienced in working on the Outer Islands and understands the internal systems; (b) Relationships at the national, state and outer island level are in place; (c) The Project will establish and maintain continual feedback processes between the outer islands and states; (d) Joint decision-making framework is developed and in place under the project; (e) The states and outer islands are to be involved / consulted in all aspects of the project impacting upon them
Project is no longer supported at the Government level	Low	(a) The project will ensure stakeholders at the national, state and outer island level are provided with regular updates on progress; (b) The findings from the project will provide core evidence of the importance of such projects in the outer islands; (c) There is direct and open communication between the PMU and Community Leaderships
Implementation of project becomes challenging due to inputs from various sectors	Low	(a) Open communication pathways between the project and Government (national, state and island) and provision of regular updates; (b) A Project Steering Committee is established and provides an avenue for inputs from sectors and interested parties (c) The Executing Agency has the final decision after assessing different inputs from stakeholders
Inadequate monitoring and evaluation plans that fail to establish relevant baselines and data collection methodologies result in the program being unable to validate results in a manner that can demonstrate progress towards agreed outcome achievement.	Moderate	(a) The project is monitoring against the key results framework. An M&E plan has been developed and clearly articulates baselines, indicators which will assist in reporting to the higher level, responsibilities etc; (b) Greater engagement between the IA and EA to build M&E capacity; (c) The Project is designed to include baseline and regular tracking and reporting. (d) Development of a project M&E plan to be used for data collation and collection.
Project roll-out and/or activities are delayed	High	(a) The project will work with stakeholders on timelines and activity roll-out; (b) A restructuring paper was submitted to the AF seeking amendments to the project plan and budget - this was approved in February 2021 by the AF Board following a 12 months wait; (c) The existing controls are adequate at this point however, monitoring needs to continue; (d) The project will work closely with KMS to monitor any events and provide

		mitigation actions at the time; (e) Project has received an extension under the restructure, and a subsequent no-cost 12 month extension due to COVID19; (f) If the activity is not able to be undertaken as per the project plan, adaptive measures will be implemented and the activity will be revised to suit the environment
Effective engagement and consensus building by different water users, public and private stakeholders to agree on an integrated approach to freshwater and wastewater management	Low	The PMU is working closely with state utility companies and other local NGO's and similar projects on the best integrated approach
Community acceptance of technical design options proposed by project	Moderate	(a) PMU's ongoing development of awareness tools will help address the risk; (b) Encourage more consultancy and engagement with communities or redesign technology to suit local settings (c)Project utilizing existing technical document on technology and good practices from similar project for its activities
Failure to engage effectively with stakeholders and achieve implementation of activities		(a) The project has undertaken inception workshops and consultations at the national, state and outer island level to ascertain inputs and amend the implementation strategy; (b) Stakeholder engagement is continuing through the PMU and led by the community coordinators, State Finance & Emp; Administration Officers and the National Project Manager. In addition to existing controls, strengthened coordination mechanisms and engagement is in place as outlined in the project logframe and as per the existing controls
Endorsement of interventions in outer islands may take longer than expected	Moderate	Continued engagement between the PMU with stakeholders at the national, state and outer island level. The project management unit is ensuring all stakeholders at all levels are engaged in consultations and decision-making. The national and state Governments are kept informed of progress via regular communications from the PMU.
Lack of use of water and sanitation facilities installed by the Project		The project plan has been amended to ensure the outer islands have clearly identified options for infrastructure. Furthermore, outer island communities will be engaged in decisions and input into the options to ensure the appropriateness of the options in the island / village context
Traditional values and governing structures restrict the participation of women		The project team will ensure there are separate meetings for women and men, and have island facilitators. Whilst this is effective, the project's Gender & Decide Inclusion Plan (currently in development) will provide greater detail on mitigation actions to be undertaken
Failure to implement the ESM Plan	Moderate	A revised ESM Plan has been developed and budgeted for in the project plan. Training has been put in place for the PMU and the ESM Plan is also being monitored by the IA. Training and ongoing guidance is provided to the PMU to ensure full implementation of the Plan
Theft of assets from the water systems	Moderate	An MOA and regulations are in progress addressing this issue. The project is working with the municipal and national governments to treat any infrastructure built by the FSM AF project to be considered national property for the duration of the project, thus, any damage to the infrastructure will be considered

		a national offence. In addition, the community coordinator role will make sure the infrastructure is secured, protected and well maintained.
Construction Materials Shortage	Moderate	A list of needed / required construction materials have been identified and developed by the relevant stakeholders; Acquire services / materials from foreign countries / suppliers
In-Kind contribution from local communities	Moderate	Development of MOU/ MOA between community leadership and the project on set / specific roles of community during the project implementation
Lost and damaged of goods during delivery	Low	Arrangement with Transporter for special care of materials is put in place. There is also a requirement in place for a project officer or community officer to accompany the materials during delivery to outer islands. Delivery should not take place during bad weather.
Training is not customised for outer island audiences		The project is ensuring any training is appropriately framed for the audience. Training and mentoring will be ongoing throughout the life-of-the project and not based on one-offs. The training will also focus on train-the-trainer to ensure sustainability
Funds misappropriation, corrupted procurement, contract and human resource management processes	Low	(a) Engagement with known partners with good reputation; (b) Government of FSM financial management and procurement systems and controls are in place confirming appropriate management capacities and controls; (c) Budgets and program deliverables designed to ensure effective procurement; (d) Budget categories clearly defined; (e) Proactive monitoring of programs, budgets and acquittals.
Financial audits are not provided in a timely manner or show discrepancies	Moderate	Government of FSM audit processes are in place, and the FSM Public Auditor as an independent statutory authority has since been engaged on project audits; to minimise challenges of dealing with external auditors not based in FSM.
Complaints on inappropriate procurement of work packages	Low	Government of FSM procurement processes are in place.
Project is delayed due to delays in contracts	Low	The IA and EA are experienced in contract administration and will work closely to ensure contractual negotiations are undertaken in a timely manner.
Non-procurement of essential items for field visits to the outer islands	High	The document titled " Kapetal Wa" was developed as a guidance for any visits to outer islands and to align with FSM Finance procurement policy/requirements to support tokens of respect that are necessary for outer island field visits.
Activities are under-budgeted or costs increase	High	The original project plan and budget have been reviewed and the project was restructured in 2019/2020 to better align activities and budgets. Budgets have been developed to allow flexibility within the activities and the funds allocation.

Critical Risks Affecting Progress (Not identified at project design)

Are there any critical risks with a 50% or > likelihood of affecting progress of project? No

Identify Risks with a 50% or > likelihood of affecting progress of project

Identified Risk	Current Status	Steps taken to mitigate risk

Risk Measures

Were there any risk mitigation measures employed during the current reporting period? If so, were risks reduced? If not, why were these risks not reduced?

During the current reporting period, the project applied for an extension for 12 months due to COVID19. This was approved by the Adaptation Fund Secretariat towards the end of this reporting period. This allowed for continuation of project activities. Following border closures due to COVID19, the Implementing Entity was also able to field an in-country mission to identify and propose key actions to address ongoing project challenges. This has reduced risks particularly at the project level.

ESP Compliance

Section 1: Identified ESP Risk Managemen	t		
Was the ESP risks identification complete at the time of funding approval? Yes			
1.Compliance with the law			
Are environmental or social risks present as per table II.K (II.L for REG) of the proposal?	No		
During project/programme formulation, an impact assessment was carried out for the risks identified. Have impacts been identified that require management actions to prevent unacceptable impacts? (as per II.K/II.L)			
List the identified impacts for which safeguard measures are required (as per II.K/II.L)			
List here the safeguard measures (i.e. avoidance, management or mitigation) identified for each impact that are supposed to be (or had to be) implemented during the reporting period. Please break down the safeguard measures by activity.			
List the monitoring indicator(s) for each impact identified.			
State the baseline condition for each monitoring indicator			
Describe each safeguard measure that has been implemented during the reporting period			
Describe the residual impact for each impact identified - if any - using the monitoring indicator(s)			
Describe remedial action for residual impacts that will be taken			
2.Access and equity			
Are environmental or social risks present as per table II.K (II.L for REG) of the proposal?	No		
During project/programme formulation, an impact assessment was carried out for the risks identified. Have impacts been identified that require management actions to prevent unacceptable impacts? (as per II.K/II.L)			
List the identified impacts for which safeguard			

measures are required (as per II.K/II.L)	
List here the safeguard measures (i.e. avoidance,	
management or mitigation) identified for each impact	
that are supposed to be (or had to be) implemented	
during the reporting period. Please break down the	
safeguard measures by activity.

identified - if any - using the monitoring indicator(s)	
Describe remedial action for residual impacts that will be taken	
14.Physical and cultural heritage	
Are environmental or social risks present as per table II.K (II.L for REG) of the proposal?	No
During project/programme formulation, an impact	
assessment was carried out for the risks identified.	
Have impacts been identified that require	
management actions to prevent unacceptable	
impacts? (as per II.K/II.L)	
List the identified impacts for which safeguard	
measures are required (as per II.K/II.L)	
List here the safeguard measures (i.e. avoidance,	
management or mitigation) identified for each impact	
that are supposed to be (or had to be) implemented	
during the reporting period. Please break down the	
safeguard measures by activity.	

List the monitoring indicator(s) for each impact identified.			
State the baseline condition for each monitoring indicator			
Describe each safeguard measure that has been implemented during the reporting period			
Describe the residual impact for each impact identified - if any - using the monitoring indicator(s)			
Describe remedial action for residual impacts that will be taken			
15.Lands and soil conservation			
Are environmental or social risks present as per table II.K (II.L for REG) of the proposal?	No		
During project/programme formulation, an impact assessment was carried out for the risks identified. Have impacts been identified that require management actions to prevent unacceptable impacts? (as per II.K/II.L)			
List the identified impacts for which safeguard measures are required (as per II.K/II.L)			
List here the safeguard measures (i.e. avoidance, management or mitigation) identified for each impact that are supposed to be (or had to be) implemented during the reporting period. Please break down the safeguard measures by activity.			
List the monitoring indicator(s) for each impact identified.			
State the baseline condition for each monitoring indicator			
Describe each safeguard measure that has been implemented during the reporting period			
Describe the residual impact for each impact identified - if any - using the monitoring indicator(s)			
Describe remedial action for residual impacts that will be taken			
Section 2: Monitoring for unanticipated impacts / corrective actions required			
Has monitoring for unanticipated ESP risks been carried out?	No		
Have unanticipated ESP risks been identified during the reporting period?	No		
If unanticipated ESP risks have been identified, describe the safeguard measures that have been taken in response and how an ESMP has been prepared/updated			
Section 3: Categorisation			

Yes

Is the categorisation according to ESP standards still

If No, please describe the changes made at activity, output or outcome level, approved by the Board, that

relevant?

Section 4: Implementation arrangements	
What arrangements have been put in place by the Implementing Entity during the reporting period to implement the required ESP safeguard measures?	The ESP Compliance is subject to revision of the Environmental and Social Management Plan (ESMP), which is dependent on completion of an Environmental Impact Assessment (EIA) This activity has not been completed in the current period of reporting. The relevant condition relating to this section is as follows: Decision B.35-36/18: Request SPREP to submit to the secretariat for clearance prior to the execution of the coastal protection measures: (i) The Environmental Impact Assessment (EIA) to be undertaken in relation to the coastal protection measures; and (ii) The revised Environmental and Social Management Plan prepared in accordance with the findings of the EIA as aforementioned and in compliance with the Adaptation Fund's Environmental and Social Policy
Have the implementation arrangements been effective during the reporting period?	Yes
What arrangements have been put in place by each Executing Entity during the reporting period to implement the required ESP safeguard measures?	The ESP Compliance is subject to revision of the Environmental and Social Management Plan (ESMP), which is dependent on completion of an Environmental Impact Assessment (EIA). This activity has not been completed in the current period of reporting. The relevant condition relating to this section is as follows: Decision B.35-36/18: Request SPREP to submit to the secretariat for clearance prior to the execution of the coastal protection measures: (i) The Environmental Impact Assessment (EIA) to be undertaken in relation to the coastal protection measures; and (ii) The revised Environmental and Social Management Plan prepared in accordance with the findings of the EIA as aforementioned and in compliance with the Adaptation Fund's Environmental and Social Policy
Have the implementation arrangements at the EEs been effective during the reporting period?	Yes

Section 5: Projects/programmes with unidentified sub-projects (USPs). This section needs to be completed only if the project/proramme includes USPs. Have the arrangements for the process described in the ESMP for ESP compliance for USPs been put in Partially place? Is the required capacity for ESMP implementation present and effective with the IE and the EE(s)? Yes Please provide details. Have all roles and responsibilities adequately been Yes assigned and positions filled? Has the overall ESMP been updated with the findings of the USPs that have been identified in this reporting No period?

Identified USPs in the reporting period		ESP risks identified	impact assessment	impoets	disaggregation to identify	measures	for each
--	--	----------------------	----------------------	---------	----------------------------	----------	----------

Section 6: Grievances	
Was a grievance mechanism established capable and known to stakeholders to accept grievances and complaints related to environmental and social risks and impacts?	Yes
Were grievances received during the reporting period?	No

List all grievances received during the reporting period regarding environmental and social impacts; gender	,	Provide the
related matters; or any other matter of	the grievance redress	status/outcome
project/programme activities	process	

Comments

The ESP Compliance is subject to revision of the Environmental and Social Management Plan (ESMP), which is dependent on completion of an Environmental Impact Assessment (EIA). This activity has not been completed in the current period of reporting. The relevant condition relating to this section is as follows: Decision B.35-36/18: Request SPREP to submit to the secretariat for clearance prior to the execution of the coastal protection measures: (i) The Environmental Impact Assessment (EIA) to be undertaken in relation to the coastal protection measures; and (ii) The revised Environmental and Social Management Plan prepared in accordance with the findings of the EIA as aforementioned and in compliance with the Adaptation Fund's Environmental and Social Policy

GP Compliance

Section 1: Quality at entry

Was an initial gender assessment conducted during the preparation of the project/programme's first submission as a full proposal? No

Does the results framework include gender-responsive indicators broken down at the different levels (objective, outcome, output)? Yes

List the gender-responsive elements that were incorporated in the project/programme results framework

Gender- responsive element	Level	Indicator	Baseline	Target	Rated result for the reporting period

Please justify your rating. Outline the positive and negative progress made by the project since it started. Provide specific recommendations for next steps.

While the project has made positive progress in ongoing roll out of training/capacity building activities, installation or repairs to WHSS, and completing legislative and policy review; there has been significant delay in progressing EIA and update to the ESMP to meet project conditions. The impact of COVID19 as

well as high project personnel turnover has contributed to this and it is anticipated that following key positions being filled and borders reopening, there should be significant and ongoing progress of activities.

Please justify your rating. Outline the positive and negative progress made by the project since it started. Provide specific recommendations for next steps.

COVID19 has significantly affected progress of some activities. The PMU under the EE has been actively engaging states and stakeholders, and has reported to the IE on challenges not within our control. Some issues include facilitating agreement within individual states as not all activities come under national government authority. There are also challenges relating to remoteness of some island communities and logistics for transfer of equipment as well as project personnel visiting project sites. Limited availability of materials for construction has also held back progress on some activities. Overall rating is proposed as satisfactory, although two output areas which are rated as unsatisfactory/marginally unsatisfactory are anticipated to be addressed in the next reporting period. The PMU has discussed with the IE, measures in place to address these challenges.

Overall rating

Marginally Satisfactory

Please justify your rating. Outline the positive and negative progress made by the project since it started. Provide specific recommendations for next steps.

The project has been impacted by COVID19 both in terms of international consultants and IE personnel unable to visit project sites/meet face-to-face with the project team so there has been no direct supervision over a number of years. There has been positive progress to move project activities such as installation, repairs and maintenance to WHSS infrastructure. The project is progressing an extension based on the impacts of COVID19 and requires extended time to meet key conditions. Once the EIA work has been progressed and the ESMP updated, this should move project activities significantly. Commitment of state governments to progressing activities such as the water investment plans needs to be considered, and targets possibly reviewed during the next reporting period.

Outputs	outer islands. Completion of installation of new rainwater harvesting systems in six outer islands. Number of infrastructure improvements by type, island and village supported by the project Number of people (disaggregated by	islands in poor conditions (leakages, contaminated), including poor guttering and down piping. There is no culture of maintenance of water harvesting systems at community level due to lack of specialised equipment and maintenance planning.	well has been completed. Satawan and Lekinioch: 8 tanks are installed and procurement of materials for 40 tanks to be repairedd is in progress. Lekinioch: undergoing repairs to 12 water wells. Nukuoro: 2 tanks installation completed and 3 wells upgraded Kapingamarangi: major repair work completed on 90% of the target tanks and completed on 2 wells.	80% of households on the target outer islands have improved access to potable water from the WHSS. At least 20% of women, men
Outputs	Output 2.3 At least two options for sanitation have been identified and tested in the participating outer islands Number of people (disaggregated by GSI categories) benefitting from WASH (led by strategic partners including UNICEF, MYWSA and others to be identified) programs to which the project is contributing	awareness of WASH techniques useful for application during drought periods and post-typhoon situations. Limited sanitation facilities with some facilities with some facilities not used by communities. Currently the majority of people use the lagoon for toileting. The existing water-flushed toilets or pit-latrine toilets are in poor condition, with leakage into soil and lagoon. Contamination / eutrophication of lagoon from excessive nutrient	reaction on initial introduction of the self composting toilet concept from the communities, it has been recommended by the executing agency to target schools for installation of composting toilets. In addition, the project is working closely with UNICEF to develope an appropriate awareness approach	are being tested and monitored in at least 50% of the target outer islands At least 50% of people on the six outer islands have participated in

needs to be waste undertaken to seek communities feedback on acceptable sanitation facilities. WASH Programmes: The collaboration between the project, UNICEF, the FSM Department of Health (DOH) and other NGOs to develop WASH guidelines tailored towards the local context and standardization of all WASH programmes by NGOs, has not yet occurred due to the prioritisation of the Department of Healthy towards preparing for the Covid-19 pandemic. However, WASH awareness activities are ongoing in Pohnpei in 2 outer islands (33% of target islands). Number of People benefitting from WASH: Nukuoro: 46 participants (22%) of popn) (F=20 or 19% of female population; M=26 or 25% of male population) Kapingamarangi: 60 participants (17% of popn) (F=27 or 17% of female population; M=33 or 17% of male population) In 2022, intense awareness activities were undertaken on this component in collaboration with UNICEF, DOH and DOE.

Outcomes	youth benefiting from the access provided by inland road Number of	Malem-Utwe coastal road highly exposed to severe coastal erosion and is in high risk of being washed away within the next 10 -30 years Unsealed inner road limits access of communities inland	Design work had been halted since early 2020 due to travel restrictions from COVID-19. In 2022, the draft road design was submitted for Government feedback. Following feedback being received on this work, it is anticipated that the final road design will be in place by mid 2023.	One road design produced in line with best practice. At least 80% of the inhabitants of Malem and Utwe (20-75 years age group) feel they have increased coastal resilience to inundation and erosion.
Outcomes	Output 3.1 Design for construction of the road completed to best practice.	No road or design for a new road exists	Design work has commenced, however, this has been halted since early 2020 due to travel restrictions from COVID-19. Draft design work was continued in 2022 following reopening of borders, and has been submitted to relevant Government agencies for their feedback.	A completed road design that includes all climate risks and resilience aspects as well as consideration for all essential utility requirements. Financing of the road construction is achieved.
Outputs	practice Length (in kilometres/miles) of coastline revetment	patched only after extreme events Limited replanting has been undertaken near waterways and	In early 2022, the Terms of Reference for the tender to undertake the EIA work was drafted and advertised, requesting tenders under the Government's procurement system. Delays were experienced due to lack of in-country expertise on EIA and travel restrictions which understandably would have impacted any anticipated travel of experts into the country. The	Mosral and Paal coastline protected in the order of 2.5 km or 1.6 miles At least 50% of communities have participated in replanting and land stabilisation schemes

addtion, regular Facebook (FSM Adaptation Fund Project) page posting on the project activties has reached 6000 people. A Knowledge, Attitude and Practice survey was developed to assess best approach based on people preceptions on climate change and sanitation. To date, in 2022; the following key communications products continue to be central resources to promote visibility of the project and supporting public communications: (i) Project Newsletter (ii) Social Media Updates The PMU also continues to engage in other program/project workshops with development partners working both in the sector and in FSM, and presentation of the project progress and opportunities for collaboration has increased public visibility. Engagement varies from in person to online via zoom or other web platforms. The new M&E System has also allowed information on the project to be shared on partner websites outside of FSM including the AKVO website. The M&E Plan and monitoring and

reporting tool is in
place, and a data
management portal
is being developed
to support project
reporting.

Comments

Lessons Learned

Implementation and Adaptive Ma	nagement	
Describe any changes undertaken to improve results on the ground or any changes made to project outputs (i.e. changes to project design)	Challenges & Opportunities	No changes were made to project outputs (ie. to project design) in the current reporting period
Have the environmental and social safeguard measures that were taken been effective in avoiding unwanted negative impacts?	Challenges & Opportunities	N/A- the ESMP is due to be reviewed, and is dependent on the finalisation of the EIA under Component 3 of the project. Once finalised, the EIA is to be submitted to the Secretariat for approval (as per project conditions imposed at restructure).
How have gender considerations been taken into consideration during the reporting period? What have been the lessons learned as a consequence of inclusion of such considerations on project performance or impacts? List lessons learned specific to gender, detailing measures and project/programme-specific indicators highlighting the role of women as key actors in climate change adaptation.	Opportunities	Reporting on gender indicators as per the project GP, have been incorporated into field capture of data for M&E. This has supported disaggregation of beneficiaries which allows the project to identify potential impacts/uptake at the community level on different genders. Reporting disaggregated by gender also identifies key roles within project communities, in relation to maintenance of WHSS infrastructure and opportunities to review or improve approaches to training or outreach/community awareness.
Were there any delays in implementation? If so, include any causes of delays. What measures have been taken to reduce delays?	Challenges	There were several project delays which were directly impacted by COVID19 including the impacts on supply chains and logistics for project materials as well as

		shipping/transfer to states and outer islands. This has also impacted procurement where certain project activities dependent on international expertise were affected, with FSM borders closed up until recently. To address this, the project has submitted an application for a 12 month extension based on the impacts of COVID19 to progress some of the delays in
What implementation issues/lessons, either positive or negative, affected progress?	Challenges & Opportunities	Challenges - as mentioned above, the impact of COVID19 has been significant, on project implementation and subsequent delays. Other challenges include the project's unique context where consensus for most activities are facilitated not just at the national level, but also within autonomous states. This has affected progress on certain activities such as the Water Investment Plans. High staff turnover has been impacted by competitive consultant rates offered by other development projects, where staff continue to leave for more attractive remuneration. Opportunities - Given the challenges and unforeseen nature of the global health pandemic, it is important to conservatively plan future activities and progress. There is opportunity to review targets under certain activities (for example, the feasibility of completing Water Investment Plans across all states, as opposed to focusing on one state that has confirmed prioritisation of this work). The diversity of state priorities and differing jurisdictions is difficult for project implementation in FSM, and blanket targets across all states should be reviewed. Positive aspects of project implementation - the Project

Manager and EE has addressed the continued impact of staff turnover by consolidating scope of certain terms of reference within existing roles. The M&E Officer is also undertaking communications given the link between visibility/knowledge products to what is captured in the project M&E system. There is also opportunity for the IE to support broader visibility in the next reporting period.

Has the project already reached mid term or project completion?(yes/no).

Yes

Climate Resilience Measures

What have been the lessons learned, both positive and negative, in implementing climate adaptation measures that would be relevant to the design and implementation of future projects/programmes for enhanced resilience to climate change?

It is important to be realistic regarding project ambition at design phase especially where infrastructure components are included in project design. It is not just a matter of ensuring that there is alignment to available project budget/need for cofinancing, but to also take into consideration the environmental impact and implications of EIA and to development of an ESMP and the available capacity within the region/sub-region to undertake this work. The implementation context in FSM is unique given the autonomy of states, and provides an added challenge in terms of consolidating buy-in or consensus at the state level. National targets need to take into consideration that agreement across all states is often necessary, and state targets should reflect autonomy within each state and consider differing priorities from state to state (ie. the same target cannot be applied uniformly for each individual state if priorities differ). There are positive opportunities to complement/be complemented by other projects or initiatives either under design or under implementation in the same project areas.

What is the potential for the climate resilience measures undertaken by the project/programme to be replicated and scaled up both within and outside the project area?

There is great potential for scaling up climate resilience measures (an example is through interest from other partners to finance construction of roadworks that were revised during project restructure), as well as replication to other Pacific islands small states given shared challenges relating to water security and more broadly to climate resilience.

Readiness Interventions (Applicable only to NIEs that received one or more readiness grants)

What have been the lessons learned, both positive and negative, in accessing and implementing climate finance readiness support that would be relevant to the preparation, design and implementation of future concrete adaptation projects/programmes?	NA
How have the outputs (such as manuals, guidelines, procedures or the experience from providing peer support, etc) from employing readiness grants been used to inform institutional capacity needs, gender issues, and environmental and social aspects in developing and implementing concrete projects/programmes for enhanced resilience to climate change?	NA
Concrete Adaptation Interventions	
What have been the lessons learned, both positive and negative, in implementing concrete adaptation interventions that would be relevant to the design and implementation of future projects/programmes implementing concrete adaptation interventions?	It is important to be realistic regarding project ambition at design phase especially where infrastructure components are included in project design. It is not just a matter of ensuring that there is alignment to available project budget/need for co-financing, but to also take into consideration the environmental impact and implications of EIA and to development of an ESMP and the available capacity within the region/sub-region to undertake this work.
What is the potential for the concrete adaptation interventions undertaken by the project/programme to be replicated and scaled up both within and outside the project area?	There is great potential for scaling up climate resilience measures (an example is through interest from other partners to finance construction of roadworks that were revised during project restructure)
Knowledge Management	
How has existing information/data/knowledge been used to inform project development and implementation? What kinds of information/data/knowledge were used?	The project has developed an M&E system where data captured is informing the development of training materials/communications and outreach products which support project implementation. Disaggregation of community population data is also useful for planning approaches to outreach or training given gender specific roles in communities.
Has the existing information/data/knowledge been made available to relevant stakeholder? If so, what chanels of dissemination have been used?	Through the M&E platform online. There is capability to share content directly to social media channels or to email if needed. Data informs outreach material and is incorporated into messaging during engagement between the PMU/state coordinators and respective communities.
Please list any knowledge products generated and include hyperlinks whenever posssible (e.g. project videos, project stories, studies and technical reports, case studies, tranining manuals, handbooks, strategies and plans developed, etc.)	https://www.facebook.com/fsmafproject/about
If learning objectives have been established, have they been met? Please describe.	Learning objectives are built into capacity building/training at the community level. In the next reporting period, there will be verification of learning through surveying/rehashing techniques to establish community absorption of climate change/adaptation concepts as well as skills for repair/maintenance of

	small infrastructure at community level.
Describe any difficulties there have been in accessing or retrieving existing information (data or knowledge) that is relevant to the project. Please provide suggestions for improving access to the relevant data.	There are connectivity issues in some of the outer islands, where state coordinators sometimes find it difficult to upload data in real time into the M&E system. Ongoing training is being proposed and a large amount of manually captured data is being processed to transfer onto the M&E system.
Has the identification of learning objectives contributed to the outcomes of the project? In what ways have they contributed?	Learning objectives are built into capacity building/training at the community level. In the next reporting period, there will be verification of learning through surveying/rehashing techniques to establish community absorption of climate change/adaptation concepts as well as skills for repair/maintenance of small infrastructure at community level. In turn, these learning objectives are directly aligned with the capacity building needs of the project and to support resilience of communities in FSM.
Innovation	
Describe any innovative practices or technologies that figured prominently in this project.	NA at this stage of reporting
Complementarity/ Coherence with other cl	imate finance sources
Has the project been scaled-up from any other climate finance? Or has the project build upon any other climate finance initiative?	No
If you answered yes, kindly specify the name of the Fund/Organization.	

Results Tracker

Goal: Assist developing-country Parties to the Kyoto Protocol and the Paris Agreement that are particularly vulnerable to the adverse effects of climate change in meeting the costs of concrete adaptation projects and programmes in order to implement climate-resilient measures.

Impact: Increased resiliency at the community, national, and regional levels to climate variability and change.

Is this the mid-term or terminal project performance report? Before Midterm

Impact: Increased resiliency at the community, national, and regional levels to climate variability and change Core Indicator: No. of beneficiaries % of female % of Youth Total beneficiaries beneficiaries Direct beneficiaries 51 49 Baseline information supported by the 5536 project Indirect beneficiaries Baseline information supported by the 97308 51 49 project

--

Baseline information	0	0	Public
Target performance at completion	328	20	Public
Performance at mid-term			
Performance at completion			

Indicator 2.1.2: No. of targeted institutions with increased capacity to minimize exposure to climate variability risks

	Type	Scale	Sector	Capacity Level
Baseline information				
Target performance at completion				
Performance at mid- term				
Performance at completion				

Output 2.2. Increased readiness and capacity of national and sub-national entities to directly access and program adaptation finance

Indicator 2.2.1: No. of targeted institutions benefitting from the direct access and enhanced direct access modality

	Number of beneficiaries	Scale	Sector	Capacity Level
Baseline information				
Target performance at completion				
Performance at mid- term				
Performance at completion				

Outcome 3: Strengthened awareness and owernship of adaptation and climate risk reduction processes

Indicator 3.1: Increase in application of appropriate adaptation responses

		-
	Percentage of targeted	
	population applying adaptation	Sector
	measures	
Baseline information	80	Coastal management
Target performance at completion	80	Water management
Performance at mid-term		
Performance at completion		
	•	

Output 3.1: Targeted population groups participating in adaptation and risk reduction awareness activities

Indicator 3.1.1: Percentage of targeted population awareness of predicted adverse impacts of climate change, and of appropriate responses

	No. of targeted beneficiaries	% of female participants targeted	Level of awareness
Baseline information	3253	50	2: Partially not aware
Target performance at completion	3253	60	5: Fully aware
Performance at mid-term			
Performance at completion			

Output 3.2: Stengthened capacity of national and subnational stakeholders and entities to capture and disseminate knowledge and learning

Indicator 3.2.1: No. of technical committees/associations formed to ensure transfer of knowledge

	No. 01 technical	% of women represented in committes/associations	Level of awareness
Baseline information			
Target performance at completion			
Performance at mid-term			
Performance at completion			

Indicator 3.2.2: No. of tools and guidelines developed (thematic, sectoral, institutional) and shared with relevant stakeholders

No. of tools and guidelines	Туре	Scale
		ΓΙνηρ

Outcome 4: Increased adaptive capacity within relevant development sector services and infrastructure assets

Indicator 4.1: Increased responsiveness of development sector services to evolving needs from changing and variable climate

	Project/programme sector	Geographical scale	Response level		
Baseline information	Water management	II ocai	2: Partially responsive (Lacks most elements)		
Target performance at	Water management	Local	5: Highly responsive (All		

completion	1		defined elements)

Effectiveness of

	Ecosystem (type)	natural assets or ecosystems protected/rehabilita	protection/rehabilitat
Baseline information			
Target performance at completion			
Performance at mid- term			
Performance at completion			

Outcome 6: Diversified and strengthened livelihoods and sources of income for vulnerable people in targeted areas

Indicator 6.1: Increase in households and communities having more secure access to livelihood assets

indicator 6:1: Therease in nouseholds and communities having more secure access to recimoud assets					
		% of female headed households	Improvement level		
Baseline information					
Target performance at completion					
Performance at mid-term					
Performance at completion					

Indicator 6.2: Increase in targeted population's sustained climate-resilient alternative livelihoods

	No. of targeted households	% of female neaded	% increase in income level vis-à-vis baseline	Alternate Source
Baseline information				
Target performance at completion				
Performance at mid- term				
Performance at completion				

Output 6 Targeted individual and community livelihood strategies strengthened in relation to climate change impacts, including variability

Indicator 6.1.1: No. and type of adaptation assets created or strengthened in support of individual or community livelihood strategies

	Number of Assets	Type of Assets	Sector	Adaptation strategy
Baseline information				
Target performance at completion				
Performance at mid- term				
Performance at completion				

	Number of households (total number in the project area)	Income source	Income level (USD)
Baseline information			
Target performance at completion			
Performance at mid-term			
Performance at completion			

Outcome 7: Improved policies and regulations that promote and enforce resilience measures

Indicator 7: Climate change priorities are integrated into national development strategy

	Integration level
Baseline information	
Target performance at completion	
Performance at mid-term	
Performance at completion	

Output 7:Improved integration of climate-resilience strategies into country development plans

Indicator 7.1: No. of policies introduced or adjusted to address climate change risks

	No. of Policies introduced or adjusted	Sector	Scale	Туре
Baseline information	1	Water management	National	Water policy
Target performance at completion	4	Water management	National	Water policy
Performance at mid- term				
Performance at completion				

Indicator 7.2: No. of targeted development strategies with incorporated climate change priorities enforced

	No. of Development strategies	Regulation	Effectiveness
Baseline information	1	3: Partially enforced (Some elements implemented)	2: Partially effective
Target performance at completion	4	4: Enforced (Most elements implemented)	4: Effective
Performance at mid-term			
Performance at completion			

Outcome 8: Support the	development and diffus	sion of innovative a	daptation practices,
tools and technologies			

Indicator 8: Innovative adaptation practices are rolled out, scaled up, encouraged and/or accelerated at regional, national and/or subnational level

	Sector of innovative practice	Geographic Scale	Туре		
Baseline information					
Target performance at completion					
Performance at mid-term					
Performance at completion					

Output 8: Viable innovations are rolled out, saled up, encourages and/or accelerated

Indicator 8.1: No. of innovative adaptation practices, tools and technologies accelerated, scaled-up and/or replicated

	No. of innovative practices/ tools technologies	Sector	Status	Effectiveness
Baseline information	Ü			
Target performance at completion				
Performance at mid- term				
Performance at completion				

Indicator 8.2: No. of key findings on effective, efficient adaptation practices, products and technologies generated
